WEEK 2 Module 6

NodeJS Fundamentals

FS Module

The File System module provides a way of working with the computer's file system.

The syntax for including the File System module in your application:

```
const fs = require('fs');
```

This module can do a great deal of powerful stuff. In this module, we will talk about reading data from a file and write data into a file. We will see how we can do it both synchronously and asynchronously.
