WEEK 1 Module 3

HTTP: Understanding the Foundations

HTTP ---- Hypertext Transfer Protocol

The world's web browsers, servers, and related web applications all talk to each other through HTTP, the Hypertext Transfer Protocol. HTTP is the common language of the modern global Internet.

It is essential that you have a reasonable knowledge of HTTP before proceeding with developing web servers.

This module will touch on a bit about HTTP but if you want to learn much more about this concept, then it is essential that you check out the book called:

HTTP: The Definitive Guide *by David Gourley and Brian Totty*

I have a digital copy of the book and you can always reach out to me for it.
